

Allied Veterans Memorial Skating Rink
Everett, Massachusetts

Project Scope of Work

The project consisted of replacing the existing skating rink built in the early 1960's in Everett, Massachusetts with a new 35,000 square foot full service skating arena. The new rink was built directly adjacent to the existing pool and bathhouse making the new complex one of Massachusetts' finest recreation facilities.

The new arena services the Everett High School hockey team and other local organizations while at the same time offering the greater community a first class skating rink. The rink is open to the public and offers a full service snack bar, skate rental shop, changing rooms, shower facilities, and arena with seating for hundreds of spectators. In addition, the project also included the construction of a new 20' x 30' Tot Pool adding to the complexes' pool facilities.

The project received the Construction Excellence Award for new Construction from DCAM.
