

# BRIDGE CONSTRUCTION

## Maurice Tobin Bridge Substructure Repair Charlestown and Chelsea, Massachusetts

### Project Scope of Work

This project involved extensive concrete repairs to all of the piers supporting the Maurice J. Tobin Memorial Bridge that connects Boston with the North Shore. As general contractor, Boston Building & Bridge was faced with the massive challenge of accessing the piers in order to complete the repairs, which involved working at heights greater than 150 feet both over water and continually traveled roadways. Boston Building & Bridge's expertise in concrete restoration and complex staging projects enabled us to easily meet the challenges presented by this unique project.
